COMPUTER SCIENCE & ENGINEERING

June 15, 2006

Daniel Lowd
Computer Science & Engineering

Dear Lowd,

The goals of the Review of Progress Committee are to assess students' progress, to give periodic feedback of this assessment to them, and to support and encourage student-advisor interaction. The reviews are based both on input from the faculty and your current academic achievement and record.

Based on reports from you and your advisor, the Review of Progress Committee has determined that you have made excellent progress in the past academic year. We are especially pleased to learn that you are working on your general examination, which we expect you to take next year.

Congratulations for your three published papers. The Committee commends you for your high level of professional activity and accomplishments: attending conferences, delivering talks, presenting posters, and reviewing papers.

Many congratulations on winning the highly-competitive Microsoft Research Graduate Fellowship!
Good job!

Best wishes for continued success and progress in your remarkable graduate career.

Yours truly,

Linda Shapiro
Professor and Chair
Review of Progress Committee
